

ENERGY MANAGEMENT SYSTEMS POLICY

Our policy as Istanbul Sabiha Gökçen International Airport aims to be the preferred airport in our region and international hub in transportation of passenger contributing to development of the Turkish Aviation sector.

To provide this aim; as Istanbul Sabiha Gökçen International Airport Terminal Operator, it covers the business processes related to the establishment and operation of the energy management system. Within the scope of this policy:

- Energy Management System guarantees that our activities within its scope are carried out in accordance with the ISO 50001:2018 standard.
- Realizing system installation in compliance with ISO 50001:2018 Energy Management System standard and ensuring its continuity,
- Establishing the appropriate energy management system by identifying legal requirements, contractual obligations and technical requirements,
- In line with the aim of preventing climate change and its negative effects; to raise awareness on energy efficiency, to communicate effectively with all stakeholders, authorities, subcontractors and passengers,
- Providing the information, technology, data, human resources necessary to achieve the goals and objectives and updating them by targeting energy efficiency,
- Continuously monitoring and periodically reviewing our energy targets and updating them when necessary,
- Complying with all conditions required by legal legislation within the scope of energy use, consumption and efficiency,
- Ensuring that the Energy Management System is integrated into all corporate management systems with a continuous improvement strategy and to ensure continuous review activities,
- Planning and implementing energy efficiency activities with a goal and target action plan every year in order to reduce environmental impacts, and conducting research for renewable energy sources,
- It commits to establish an energy management team and create training programs.
